

AI-assisted procurement and plant coordination for manufacturing teams

GenuineGigs works alongside the existing ERP to help employees complete procurement and inbound-material work faster. Role-specific assistants prepare documents, compare supplier quotations, coordinate tasks and follow-ups, and guide users through each step while employees retain control over approvals and commercial decisions.

Problems addressed

Current difficulty	How GenuineGigs helps
Work is spread across email, Excel, PDFs, calls and ERP screens.	Brings the requirement, supplier documents, tasks, approvals and status into one connected workflow.
Supplier quotations take hours to read and compare manually.	Extracts prices, taxes, freight, delivery dates, payment terms and deviations from PDF, image or Excel quotations, then prepares a comparison for review.
Managers spend time chasing updates and pending approvals.	Shows work that needs attention, sends follow-ups to the responsible role and highlights overdue tasks and blockers.
Handoffs between Purchase, Gate, Stores and Quality are often disconnected.	Carries the same requirement, RFQ and purchase-order context through gate entry, receipt and inspection.
Employees depend on experienced colleagues to understand procedures.	Role assistants explain the next step, retrieve relevant records and help prepare the required document or action in plain language.

How the workflow runs

1	2	3	4	5	6
Requirement	Supplier request	Quotation review	Comparison & approval	Purchase order	Gate, store & quality

What employees and managers can do

Role assistants - Create a material requirement in natural language. - Upload supplier quotations and prepare a verified comparison. - Draft RFQs, approval summaries and purchase orders. - Explain pending work, procedures and record status. - Prepare follow-ups while keeping final actions under human control.	Management visibility and control - See decisions, overdue work, blockers and handoffs by role. - Delegate work and request updates through the reporting hierarchy. - Keep source documents, calculations, approvals and actions traceable. - Retain approval controls for supplier release, awards, POs and ERP posting. - Use manual screens whenever detailed review or correction is required.

Expected business value

Faster cycle times Less time from requirement to supplier request and approval.	Fewer manual errors Structured extraction, validation and source-backed comparison.	Less follow-up effort Clear ownership, reminders and escalation of overdue work.	Better auditability One traceable history across documents, tasks, decisions and receipts.

Works with the existing ERP: The ERP can remain the system of record. GenuineGigs acts as the work and coordination layer above it, with controlled integrations for master data, purchase orders, status updates and other approved transactions.
