

AI-assisted procurement and plant coordination for manufacturing teams

GenuineGigs works alongside the existing ERP to help employees complete procurement and inbound-material work faster. Role-specific assistants prepare documents, compare supplier quotations, coordinate tasks and governed follow-ups, and guide users through each step while employees retain control over approvals and commercial decisions.

Problems addressed

Current difficulty	How GenuineGigs helps
Work is spread across email, Excel, PDFs, calls and ERP screens.	Brings requirements, supplier documents, tasks, approvals and status into one connected workflow.
Supplier quotations take hours to read and compare manually.	Extracts prices, taxes, freight, dates, terms and deviations from PDF, image or Excel quotations, then prepares a comparison for review.
Managers spend time chasing updates and pending approvals.	Prepares follow-ups and creates governed internal update requests for the responsible role; highlights overdue tasks and blockers.
Handoffs between Purchase, Gate, Stores and Quality are disconnected.	Carries PO, receipt, inspection, evidence and exception context across departments while keeping role ownership clear.
Employees depend on experienced colleagues to understand procedures.	Role assistants explain the next step, retrieve relevant records and help prepare the required document or action in plain language.

How the workflow runs

1 Requirement	2 Supplier request	3 Quotation review	4 Comparison & approval	5 Purchase order	6 Gate, Store & Quality
------------------	-----------------------	-----------------------	----------------------------	---------------------	----------------------------

What employees and managers can do

Role assistants

- ? Create a material requirement in natural language for an authorized role.
- ? Upload supplier quotations and prepare a verified comparison.
- ? Prepare RFQs, approval summaries and purchase-order drafts for authorized review.
- ? Explain pending work, procedures and record status.
- ? Prepare follow-ups while keeping final actions under human control.

Management visibility and coordination

- ? See decisions, overdue work, blockers and handoffs by role.
- ? Delegate structured objectives through validated reporting lines with context, constraints and due dates.
- ? Request updates without exposing private employee-agent conversations.
- ? Keep source documents, calculations, approvals and actions traceable.
- ? Retain human approval for supplier release, awards, POs and ERP posting.

Expected business value

Faster cycle times Less time from requirement to supplier request and approval.	Fewer manual errors Structured extraction, validation and source-backed comparison.	Less follow-up effort Clear ownership, governed reminders and escalation.	Better auditability Traceable history across documents, tasks, decisions and receipts.

Works with the existing ERP

The ERP remains the system of record. GenuineGigs acts as the work and coordination layer above it, with controlled, approval-gated integration boundaries for master data, purchase orders and other authorized ERP transactions.
